

The background features a dark blue-grey gradient. On the left side, there are several concentric, elliptical lines in a light yellowish-gold color, representing gravitational wave ripples. A solid red sphere is positioned on the left, partially overlapping the ripples. The main title is written in a bold, white, sans-serif font, centered horizontally and partially overlaid by the red sphere.

The GW/Adobe Creative Initiative in Science

Embedding the Adobe Creative Cloud in GW Physics
courses, research and astronomy

Vision

Unleashing students' creativity with Adobe Creative Cloud through innovative science projects combining advanced image and video processing, and digital communication.

Objectives

PROMOTE science and new technologies with creative and engaging projects

TEACH professional presentation skills that are crucial for academic and professional projects

APPLY image and video editing skills that are required in modern projects, including in science and astronomy

BUILD capacity with faculty in mastering image and video processing for teaching, research and scientific dissemination

**Experiential learning
in Physics and
Astronomy
with the Adobe
Creative Cloud**

Project

GWU academic support: 4 pillars

Implementation and timeline

Faculty development cohort program

Cohorts of **10 faculty** per academic term will...

1. Participate in workshops and training
 - GW Physics Department – TBD
 - GW Strategic Digital Learning Initiatives – workshops; Adobe Creative Cloud guidance materials; work with partners; and one-on-one instructional projects
2. Receive guidance, support and peer review of Adobe Creative Cloud instructional integration
3. Research and identify publishing opportunities

SDLI goals for faculty development

1. Transform the **faculty's perspective** of the Adobe Creative Cloud tools as software for exploration, examination and communication.
2. Create **baseline competence for how to technically use** the tools and plan their application.
3. Instill a **design thinking approach** to ideating, planning and linking the use of tools with pedagogical practice.
4. Drive **discussion and Adobe Creative Cloud tool use** in a context of **21st century skills**.
5. Identify and cultivate **opportunities to conduct research** and share what we learn about the use of Adobe Creative Cloud tools in scientific domains.
